Reasons for Allowance

1. Claims 1-18 are allowed.
2. The following is an examiner's statement of reasons for allowance:

While Selvidge discloses a configurable logic system programmed in simulate and timing of logic design such as a microprocessor with global links interconnects between partition blocks in which the time dependencies are handled by scheduling of the global links and adjusting the timing in response to the partition critical paths.

And Rostoker teaches a system for interactively design, synthesis and simulation of an electronic logic system based on a behavioral model in a high level or graphical language program.

Neither of these references taken either alone or in combination discloses a method and device for processing logic operations of a network model having all the claimed features of applicant's instant invention, specifically including: "a pair of operations in a first domain that independently have a common dependency on a source operation from a second domain are separated by at least as many operations as the total number of operations in the second domain, so that after one value is computed for one instance of an operation depending on a source operation, a next value is computed for the source operation before computing the next instance of an operation depending on the source operation." Also, there is no motivation to combine the Selvidge references with the Rostoker reference to meet these limitations. It is for these reasons that applicant's invention defines over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
